Quick Start

Tauri is compatible with **almost every frontend stack**. Select yours and get started!

💡 `create-tauri-app`

The easiest way to scaffold a new project is the `create-tauri-app` utility. It provides opinionated templates for vanilla HTML/CSS/JavaScript and many frontend frameworks like React, Svelte, and Yew.

Bash   **PowerShell**   **Cargo**   **npm**   **Yarn**   **pnpm**

```
$ cargo install create-tauri-app --locked
$ cargo create-tauri-app
```

Note that you do not need to follow the below guides if you use `create-tauri-app`, but we still recommend reading one (such as the HTML/CSS/JavaScript guide) to understand the setup.

If you're unfamiliar with web development or have no favorite frontend stack you might find the HTML/CSS/JavaScript guide the most helpful. It guides you through getting started with the most minimal frontend setup possible using either Node or Cargo.

HTML
5

HTML, CSS, and JavaScript

Build a Tauri app using HTML, CSS, and JavaScript using either Node or Cargo

NEXT.JS

Next.js

Build a Tauri app using Next.js as the frontend build tool

Qwik

Build a Tauri app using Qwik as the frontend build tool

SvelteKit

Build a Tauri app using SvelteKit as the frontend build tool

Vite

Build a Tauri app using Vite as the frontend build tool

Integrate into Existing Project

If you already have an existing web project you can integrate Tauri into it
